Game Done in

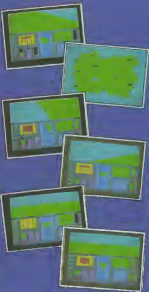

Scheduled September! The latest in
under attack from enemy aircraft. You
are the last pilot of a jet fighter, the
only one remaining in the fighter
down station - you must stop them
from hitting and destroying a nuclear
power plant. Can you save the world
from total destruction?

Wing Commander

The Aim of the Game

Scramble! Scramble! The island is under attack by enemy aircraft. You are the ace pilot of a jet fighter - a vital part of the island's defence system.

As you spring to your feet and dash across the tarmac, you wonder what they'll bomb this time. Leaping into the cockpit, you start the engines.

The instruments are functioning OK and your plane soars into the clear blue sky. The target acquisition device tells you that the enemy is heading for the nuclear power station. You must try to intercept the bomber before it gets there.

You fire and miss, dodge a missile and fire again. There is a blinding flash and the enemy plane drops like a stone. The power station is safe - for now at least - but what about the other targets? Can you save them from destruction?

Enemy planes are everywhere, but eventually you clear the skies and head for home - hoping it wasn't bombed whilst you were away.

LOADING INSTRUCTIONS

Hold down **SHIFT** and press **RUN/STOP**.

Controls

To take off, increase the power (press **↑**) and sail along the runway until your velocity is 2000/hrs or above. Then pull back on the joystick and you will begin to climb. Do not go over 4000/hrs on the ground.

When you have taken off take the power down.

Press **RT** to look at the map. You will see the installations on the island which the enemy is going to destroy. You will also see the enemy aircraft. The enemy target is shown on the map with a white square around it. The position of the enemy plane also has a white square around it. As it moves slowly across the map, either you have the enemy in sight, you can decide whether to use the missile at your cannon to shoot him out of the sky. The missile stops the enemy plane while you can aim it - that you can only carry four - so use them carefully.

You must destroy each enemy bomber before they reach their targets.

When you have cleared the area you can go up to 4000/hrs and engage the damage before the next wave comes (as long as there is not one going left round the island you must touch down on the runway at a speed of less than 5000/hrs (or forget to touch the undercarriage). Make sure the horizon is not too high when you land (within two graduations) or you will crash. Remember the power to zero by pressing **↓** and you will stop.

Flashes (power) in the air provided that you meet all the following:

- The **RT** indicator must be orange and green.
- Airfield between approximately 20 miles and 30 miles.
- You are not above 4000/hrs and in level flight.
- Speed (shown on indicator) 400 and 700/hrs.
- The plane indicator flying directly over or close to the nuclear power station (see map).

You should, to your power controls when firing up to 4000/hrs (including weapons firing) will cause the refuelling tanker to take instant action and may mean that you will miss the opportunity to refuel.

- RT** - The light up if you go too fast, either with the undercarriage down or in the air taking.
- RT** - If there is an enemy plane attacking from behind.
- RT** (red) - red of undercarriage - this is a red which shows the position relative to you, or other aircraft.
- RT** (red) - red of undercarriage - this is a red which shows the position relative to you, or other aircraft.
